Version 16.2.5 Release Notes
08/05/2019

About/Contact Info

Version 16.2.5 is the latest update to the MicroBiz for Windows. For release notes on a previous release of MicroBiz for Windows, please check our updates page online (https://microbiz.com/windows-support-release-notes/).

You can reach us through our website at **www.microbiz.com** or by phone:

- **Technical Support:** 702-749-5353 Option 1

- **Sales:** 800-929-8324 Option 2

Before Installation

- Please familiarize yourself with the contents of these release notes for details regarding this version of MicroBiz, including any limitations.
- You must be on MicroBiz for Windows version 9.0 or above to apply this update. Please call our support group to arrange a manual update if you are on a version older than version 9.0.
- As with any change to your MicroBiz system, it is very important to complete a backup of your local and system files paths (BizWin and Business directories by default) prior to beginning an upgrade.

Highlights

Please view the list below for more information on fixes and improvements added to v16.2.5

Bug Fixes

The following issues have been addressed in this release:

- Invoice #14 in Old Print Functions, does not like fractional qty. Moving forward the invoice 14 will accept fractional qty in the less than hundred value or ##.### but will round up to the next whole number when using values over one hundred or ###.###.
- Cost of Goods Display was listed under the wrong menu and has been updated to now be in the Sales Reports menu under Reports | Inventory Reports | Cost of Goods Display.
- Message box when deleting a product that still has a qty on hand used to just display do you wish to delete, but has been updated to appear as it used to in older versions mentioning the qty on hand and if you still wish to delete or not.
- Custom Items reported with invalid costs, as this type of item was previously associated with a KIT type item. Now when no components are added to a custom item, the product type will calculate the cost the same as all other products.
- 40-Column Retail Closeout reports printed a large gap when there was an expense used at the front register. Now this gap will be back to normal, skipping only a few lines instead of 12 or more.
- State and Zip were not printing correctly on Statements and Open Orders when the state and zip was separated on the Store Address Settings. This has been updated to now print correctly.
- Split Tender will now prompt for multiple checks if both tender types are set to check. Previous versions, you would only be prompted for a single check number.
- Incorrect Customer Numbers randomly being recorded to transactions. There has been an additional check routine in the writing of transactions to ensure the proper customer number is written to the proper invoice. SMB Settings may also interfere with the writing of data to your database, support can assist you with enabling SMB protocol v1 if disabled on your system.

Improvements and Enhancements

Improvements to version 16.2.5 of MicroBiz are as follows:

- This version will no longer allow the installation of MicroBiz on a Windows XP Operating System

- A message box will now display warning users of an incompatible Windows version, if Windows Server is detected.

- Training Files will no longer be counted in the Duplicate Files Check

- Printing Multiple Receipts when posting a payment is now an option with this release. You can set the number of receipts desired prior to finalizing the post payment. A reprint function in the Register Menu on the Main Menu will allow you to reprint payments received as well.
